DOMAIN 1 178 PROSPHOLIPID BINDING (PROBABLE).
                                                                                                                                                                                                                                                                 cytosolic phospholipase A(2), induces apoptosis, and potentiates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBCELLULAR LOCATION: Cytoplasmic. Translocates to membrane vesicles in a calcium-dependent fashion.
TISSUE SPECIFICITY: Expressed in various tissues such as macrophages, platelets, neutrophils, fibroblasts and lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GO; GO:0005829; C:cytosol; NAS.

                                                                                                                                                                                                                                                                                                                                                                                                              acylglycerophosphocholine + a fatty acid anion.
CATALYTIC ACTIVITY: 2-lysophosphatidylcholine + H(2)0 = glycerophosphocholine + a fatty acid anion.
ENZYME REGULATION: Stimulated by agonists such as ATP, BGF, thrombin and bradykinin as well as by cytosolic Ca(2+).
SUBMINT: Interacts with HTATIP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOMAIN: The N-terminal C2 domain, by its association with membranes, mediates the regulation of CPLA2 by presenting active site to its substrate in response to elevations of

"Purification, characterization and cDNA sequencing of calcium—
"Purification, characterization and cDNA sequencing of calcium—
"Purification, characterization and from equine neutrophils.";
Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Selectively hydrolyzes arachidonyl phospholipids in the sn-2 position releasing arachidonic acid. Together with its lysophospholipid activity, it is implicated in the initiation of the inflammatory response.
-!- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)O = 1-
-!- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)O = 1-
